EDUCATION

Master of Science (Financial Engineering)

Stevens Institute of Technology
School of Business (Division of Financial Engineering)
GPA (4.0 Scale): 3.7
Awards: Provost Master's Fellowship

May '19
Hoboken, NJ

Bachelor of Arts in Business Administration (Finance)

University of Washington
Michael G. Foster School of Business (Department of Finance and Business Economics)

Jun '17
Seattle, WA

Certificate in Quantitative Fundamentals of Computational Finance

University of Washington
College of Arts and Sciences (Department of Applied Mathematics)

Aug '16
Seattle, WA

WORK EXPERIENCE

Research Assistant

Sensorimotor Control Laboratory
Department of Biomedical Engineering; Stevens Institute of Technology
Stevens Institute for Artificial Intelligence; Stevens Institute of Technology

Hoboken, NJ
Aug '18 - Present

- Designed and implemented algorithms to assess and classify tremor severity in patients with late-stage Parkinson's Disease.
- Created a highly scalable and extensible web application to be used by the researchers in the lab during this project. This web application incorporated HIPAA-compliant data storage and access, as well as efficient cluster management with Docker and Kubernetes.
- Provided input to hardware research based on statistical tremor analysis results, with the goal of designing a complete low-cost system for tremor analysis. Contributed to additive manufacturing models and designing sensor arrays for a data collection glove to be used for the tremor analysis project.
- Performed cost comparisons to identify the most economical Infrastructure-as-a-Service (IaaS) provider, given the storage, computation, and cost constraints of the project.

Summer Research Fellow

RPI-IBM HEALS Research Center
Tetherless World Constellation; Rensselaer Polytechnic Institute
AI Horizons Network; IBM Research

Troy, NY
May '18 - Aug '18

- Led the design and development of the PaperRank Framework, a methodology for deriving probabilistic community trust in academic publications. PaperRank utilized the PageRank algorithm, coupled with a Gamma Mixture Model applied to citation networks of academic publications. A proof-of-concept was implemented, from extraction to final trust score computation, analyzing over 14 Million articles from the NCBI PubMed Database.
- Formulated and implemented novel strategies for semantically-enhanced automated extraction of medical directives from Clinical Practice Guidelines (CPGs), for eventual inclusion in a knowledge graph of Diabetes diagnosis and treatment directives. Built the 'Guideline Explorer', a tool for efficiently visualizing and examining the American Diabetes Association's 2018 CPGs.
- Explored the field of 'Semantalytics', which lies at the intersection of Semantics and Analytics. Drafted a Vision statement for the future exploration of this novel field of research, through the lens of bioinformatics.
- Formulated an Electronic Health Record (EHR) simulation engine, which utilized Monte Carlo simulations based on a generalized population heuristic to vary idiosyncratic patient attributes. The EHR Simulation engine would suggest medical tests that would be statistically likely to identify previously unknown medical issues.
- Developed the 'Guideline Analysis Framework', a mathematical formulation of CPGs. This framework was designed to enable the comparison of various CPGs from differing medical authorities addressing the same set of diseases, and to detect disparities in treatment directives.

Laboratory Assistant

Hanlon Financial Systems Laboratory

School of Business; Stevens Institute of Technology

Stevens Institute for Artificial Intelligence; Stevens Institute of Technology

Hoboken, NJ

Sep '17 - Dec '18

- Spearheaded an effort to discover and implement new technology solutions to help realize the teaching and research goals of the lab.
- Assisted in the daily operations of the lab, including assisting instructors and students (Graduate and Undergraduate), and maintaining hardware and software resources.

Business Management Team Lead

UW Hyperloop

College of Engineering; University of Washington

Seattle, WA

May '16 - Aug '17

Other Titles: Impact Development Team Lead, Control Systems Team Member

- Represented the University of Washington at the inaugural SpaceX Hyperloop Pod Competition in Hawthorne, CA. We placed 4th in the United States, and 6th globally; the competition initially received 1,700 team proposals, which were narrowed down to 30 finalists.
- Led the Business Management Team to launch a highly successful crowdfunding campaign, raising over \$20,000 in cash (with an initial goal of \$10,000), and over \$80,000 of source materials used in the construction of the Pod. The collective effort of the team led us to have the lowest-cost Pod among the 30 final teams.
- Spearheaded the sourcing and delivery of over \$50,000 of raw material, including high-density Carbon Fiber, release agents, and powerful Neodymium magnets for the final Pod assembly.
- Led sponsor outreach, and maintained relationships with internal (at the University of Washington) and external supervisors and supporters.
- Assisted the Controls Team Lead in the final design and implementation of electronic mapping and wiring on the Pod.
- Contributed to late-stage troubleshooting efforts that led to the successful implementation and deployment of Halbach arrays on the Pod, which facilitated levitation and magnetic propulsion on the test track.
- Explored the transformative economic and social effects a hypothetical Hyperloop system could have on the Pacific Northwest of the United States.

SELECTED KNOWLEDGE AREAS**Computer Science and Software Engineering**

Distributed Systems, Cloud Computing, Scientific Computing, Scalable System Architecture and Design, Data Structures, Operating Systems, Object Oriented Design, Algorithms

Data Analytics

Machine Learning, Knowledge Representation, Time Series Analysis, Graph Analytics, Artificial Intelligence, Natural Language Processing, Semantic Analysis, Data Visualization
